Why should I get a COVID-19 booster?

1. Boosting helps protect against newer variants like Omicron

2. Everyone benefits from updated COVID-19 boosters...
   - ✓ Even for people who have had COVID already
   - ✓ And even for people who already got boosted

3. Boosters help protect people around us

The bottom line: Boosters energize your immune system to improve protection against COVID-19. You should get boosted to protect yourself and those around you.
? What are the new boosters?

Monovalent shot: original booster

Bivalent shot: new, updated booster protecting against more COVID strains

When can I get a COVID-19 booster?

It depends on your age and whether you have finished a full ("primary") vaccine series. Find your age group in the graphic below. This graphic only applies to people that completed their primary series.

6 months-4 years
↓
Booster not yet available for this group

5 years and older*
↓
Eligible for 1 updated (bivalent) booster, at least 2 months after most recent COVID-19 vaccine

*Adults 18+ years who can't/won't receive an mRNA booster can get a Novavax monovalent booster, at least 6 months after completion of their primary series.
